Maximum critical path latency: **421 ms**

Initial Navigation

| URL | Resource Size | Est Savings |
|-----|---------------|-------------|
|-----|---------------|-------------|

[preconnect](#) hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

https://cdn.sanity.io/

head > link<link rel="preconnect" href="https://cdn.sanity.io/" crossorigin="anonymous">

| Origin | Source |
|--------|--------|
|--------|--------|

Preconnect candidates

Add [preconnect](#) hints to your most important origins, but try to use no more than 4.

No additional origins are good candidates for preconnecting

Optimize DOM size

^

A large DOM can increase the duration of style calculations and layout reflows, impacting page responsiveness. A large DOM will also increase memory usage. [Learn how to avoid an excessive DOM size.](#) Unscored
